Sir,

Just so we are all on the same page the 12,500.00 P.O. was for the temporary panel and installation.

The New 100-hp VFD's and installation will be a separate invoice and we will keep it under 50K

Sincerely,

Andy Anderson

Thanks – appreciate the update.

Please accept my oversight on having a preliminary cost for the VFD failure – I attached the PO we processed from your email sent previously.

Sir,

Confirmed we will also have Larry Alexander with Land and Sea services and also Crescent Electric on location Tuesday 1:00 PM also.

Sincerely,

Andy Anderson

Importance: High

Rick,

We are trying to get everyone on Board for Tuesday at 1:00 PM

Confirmed so far is a 3rd party Master Electrician, 3rd Party UL panel builder, Myself, and service group.

rd

I'm waiting on conformation from Land and Sea and also an additional 3 Party Master Electrician.

The VFD's and install will be under 50K, but I don't have an exact amount until we know of any potential issues.

I've been out for the last 3 weeks on a family emergency and its been difficult coordinating the actual talent to do this.

Sincerely,

Andy Anderson

Subject: FW: 1764 Water Facility Updates

Please reference email below – sent 13 days ago -- we REALLY need resolution on the 1764 Pump Station. The VFD's were removed from service in July due to a failure caused by unknown reasons (I believe the spin-down timer on the VFDs was not set properly and when the generator came on the power feed was not sufficient and caused a major malfunction – but I only surmise this possibility) - We (I) have asked repeatedly to have this facility inspected for proper performance and electrical integrity, which I know was somewhat completed by the Electrical Engineer, but it has been almost 5 months since this problem occurred and the PS remains running on one pump with no controls. Please update us on the status of the Project and when the VFD's can be safety reinstalled. We also need to repair or replace the check valve that is sticking open when the #1 pump (in service) fails, we cannot accept failures causing water loss. Please discuss as a TEAM – Pump Provider, Engineering, Customer Service to find a solution to this ongoing problem, it should not have taken this long to solve the problem. I appreciate all of your efforts, but really need the pump station back in full operational mode.

Andy – I still need a cost estimate on the VFD repairs, I need to discuss with Finance and CM about

the cost of this pump failure.

Subject: 1764 Water Facility Updates

Good afternoon,

Just wanting to touch base to see where we are at with 1764. Brent, I know you had an electric engineer go out and look at the facility. Is there an update on his findings?
